Forward Deployed Engineer who works directly with client companies, finds the real problem behind their manual work, and builds the software and AI systems that fix it, from factory floors to office and marketing teams.

Work Experience

SDI Creative Technologies Ltd
Jan 2026 - Present

AI & Forward Deployed Engineer — *Vancouver, BC*

- Designed and built **2 AI apps** from scratch on Next.js, FastAPI, RAG, and GraphRAG, for realtors and a manufacturer, shipping the first in **1 week** and **drawing 11 investor inquiries at one conference, up from 2**
- Proposed turning the company's button-based consumer app into an AI chat app, then designed and built it on LangGraph with a **40,000+ product** catalog, **making chat the main way users use the product**
- Lead AI implementation for **3 client companies**, automating their marketing content, government bidding, and data analysis, with one client's **reels and blog production cut from 2-3 days to 1-2 hours**
- Automated a client's government bidding work with LangGraph, with AI screening new bid postings and drafting proposal decks, **cutting research and deck preparation per bid from 1-2 days to 2-3 hours**
- Deployed AI inside SDI with Slack agents that fix bugs and post daily data and marketing reports, plus a chatbot for new-hire questions, **saving 2-3 hours per person daily and cutting 1:1 onboarding from 2-3 hours to 30 minutes**

IntelliWorks
Jun 2025 - Present

Founder — *Vancouver, BC*

- Founded an AI consultancy and signed **2 client factories of 20 and 50 employees** through my own outreach
- Interviewed the first client's workers on-site, **uncovering the root causes of quality disputes with its 40+ customers**
- Design and build each client a web app on React, Node.js, and PostgreSQL that tracks production, materials, and customers, **giving the first client's 40+ customers live order tracking and cutting messenger replies 1+ hour daily**
- Added an AI chatbot that workers use in their own language and managers use to ask for data in plain words, plus photo reading that replaced handwritten boards at **10 factory stations**, **saving 1 hour of floor walking daily**
- Automated office paperwork and customer emails while training **5 key staff** to run the system without me, **reducing the first client's office team from 3 people to 1 manager and cutting cloud costs 90%**

Dialpad
Jan 2025 - Jan 2026

Software Engineer, Co-op — *Vancouver, BC*

- Developed features and fixed bugs in C++ for the audio calling library in **Dialpad's iOS and Android apps**
- Built a C++ tool that tests phone calls automatically, removing the need to send test builds to QA, and used it to find a **critical bug** where calls failed without any error, **stopping it before it reached customers**

Photobyme (Acquired)
Apr 2022 - Jan 2026

Founder — *Vancouver, BC*

- Built the booking website solo and ran **300+ events** with photo booths I built, **growing to $8-10K monthly revenue and 3,000+ sessions**
- Ran the business with a **10-person** part-time team and no full-time photographers, **then sold it successfully**

Computrol Systems
Jan 2024 - Dec 2024

Junior Developer, Co-op — *Burnaby, BC*

- Developed C++ firmware, its management web app, and the deployment pipeline for **fuel and water control systems**
- Worked directly with customers to fix their systems and automated new-customer setup and deployments with Python and Azure Pipelines, **cutting setup time 80%**

Education

Simon Fraser University
Sep 2020 - Oct 2025

Bachelor of Computer Science — *Burnaby, BC*

Technical Skills

Programming Languages: Python, TypeScript, JavaScript, C++, SQL

AI & Machine Learning: LangGraph, LangChain, GraphRAG, RAG, Claude API, Gemini API, PyTorch

Web & Mobile: Next.js, React, React Native, Node.js, FastAPI, Flask, PostgreSQL, Supabase

Cloud & DevOps: AWS (EC2, S3), Docker, GitHub Actions, Vercel, CI/CD, Linux, Sentry
